

SUMMARY

Senior SRE with 13+ years in infrastructure, reliability, and platform engineering. Track record of driving cross-functional reliability initiatives, leading engineering teams, and architecting multi-cloud solutions at scale. Founder of Tucson.social, a suite of federated community platforms demonstrating end-to-end ownership — from architecture and operations to community governance and nonprofit strategy. Brings a rare combination of deep technical expertise, organizational leadership, and mission-driven product thinking.

CURRENT ROLE

Senior Cloud Software Reliability Engineer (Cloud SRE)

May 2022 - Present

Aerospike | Mountain View, California

- Embedded with product development teams as a dedicated SRE; drove SLO-based alerting strategy and reliability for cloud platform.
- Coordinated SRE transition of HashiCorp Vault shared infrastructure; designed provisioning and service consumer enablement strategy.
- Redesigned alerting for Aerospike Cloud platform, reducing false-positive alerts from dozens per week to 1-2 through threshold recalibration and configuration-aware monitoring.
- Drove cross-functional reliability initiatives including high-availability architecture improvements and automated operational guardrails.
- Delivered automated DNS and certificate lifecycle management for next-generation managed cloud offering based on Kubernetes, eliminating manual customer IP notification and certificate rotation toil
- Architected the migration from OpenVPN to Tailscale (WireGuard); improved network reliability and reduced operational overhead for cross-environment tasks.
- Evaluated cross-cloud infrastructure solutions to mitigate resilience risks against cloud provider capacity constraints for specialized instance types.
- Serve as incident commander during on-call rotations, owning triage, technical investigation, and resolution while delegating communications to secondary on-call. Regularly engaged as an escalation resource for complex cross-system incidents outside of rotation.
- Contributed to post-incident review culture, driving improvements to runbooks, operational guardrails, and monitoring coverage informed by incident patterns.
- Upheld SLA compliance across ~30 production customer environments through proactive monitoring, incident response, and operational rigor using Grafana and Prometheus.

PREVIOUS ROLES

Lead DevSecOps Engineer

April 2021 - April 2022

Propstream | Lake Forest, California

- Led a development team through infrastructure modernization, including branching strategy overhaul and CI/CD automation, increasing team delivery velocity by 20%.
- Orchestrated a team of contract engineers through infrastructure modernization, establishing templated CI/CD pipeline patterns and mentoring on IaC best practices.
- Reduced time-to-resolution by 50% through AWS tooling improvements and operational process redesign.
- Designed and implemented a new credential management paradigm, improving security posture across the organization.
- Managed penetration testing engagements and authored security policies.
- Maintained and migrated legacy infrastructure while architecting replacement systems.

DevOps Engineer

June 2019 - April 2021

Navex Global | Lake Oswego, Oregon

- Designed and maintained CI/CD pipelines across TeamCity, Octopus Deploy, and AWS CodeBuild; built specialized Docker containers enabling cloud-based compilation of legacy .NET codebases.
- Spearheaded cloud migration of local build infrastructure and drove branching strategy improvements, accelerating developer velocity across multiple teams.
- Partnered with engineering leads to evolve deployment processes and authored automation for environment provisioning and pipeline creation.

Systems Engineer

July 2017 - June 2019

InComm Digital Solutions | Portland, Oregon

- Supported production systems for a financial services platform; implemented Consul, Vault, and Ansible-based automation.
- Led data pipeline and database migration projects (SQL Server, RavenDB, .NET Core).
- Iteratively refined production alerting, reducing false positives from 1-2 per day to 1-2 per week through signal analysis and threshold tuning.

Additional Roles

- Application Support Specialist at InComm Digital Solutions (Nov 2015 - Jul 2017)
- SCM/Release Engineer at NTT America Inc (May 2014 - Nov 2015)
- Unix/Linux Administrator at Wal-Mart Systems (Nov 2013 - May 2014)
- Release Manager/Engineer at Wal-Mart POS Systems (Sept 2013 - Nov 2013)
- Junior Release Engineer at Ipro Tech, Inc (Feb 2013 - Sept 2013)
- Software QA Analyst and Support Liaison at Ipro Tech, Inc (July 2012 - Feb 2013)

EDUCATION

High School Diploma

August 2006 - May 2010

Casa Grande Union High School | Casa Grande, AZ

SKILLS

Cloud & Infrastructure: AWS, Azure, OCI, GCP, Kubernetes, Docker, Terraform, Ansible, Packer

Observability & Reliability: Prometheus, Grafana, SLO/SLA Management, Incident Response

Networking & Security: TCP/IP, DNS, TLS/Certificate Management, Tailscale/WireGuard, HashiCorp Vault, Consul

CI/CD & Automation: Git, GitHub Actions, Bamboo, Shell Scripting, Python, Infrastructure as Code

Languages & Frameworks: Python, JavaScript/Node.js, SQL, Shell, Perl, Java

Databases: Aerospike, SQL Server, RavenDB, NoSQL

Other: Linux, Nginx, Traefik, Agile/Scrum, Jira

FEATURED PROJECTS

U-Forge.AI | Creator & Developer | 2024–Present

Desktop TTRPG world-building application built in Rust, leveraging object-based notes to construct a knowledge graph for AI-powered retrieval and interaction.

- Designed and implemented a GraphRAG retrieval system with hybrid search across structured and unstructured note content.
- Built a multi-device inference queuing system that dynamically schedules workloads across NPU, CPU, and GPU to optimize throughput and latency on consumer hardware.
- Application is functional and demoable; actively iterating on search relevance and retrieval precision.

Tucson.social | Founder & Operator | June 2023–Present

A suite of federated community platforms for Tucson: a Lemmy forum (tucson.social), Matrix messaging (tucson.chat), and Mobilizon event coordination (meetup.tucson.social).

- Architect and maintain all infrastructure on OCI, including container orchestration, DNS, TLS, monitoring, and geofenced access controls restricting services to the Tucson metro area.
- Designed geographic access model to enforce community locality, significantly reducing abuse surface and moderation workload compared to open-registration alternatives.
- Platform federates with the broader ActivityPub network, with the majority of content interaction originating from external fediverse instances.
- Contribute upstream bug fixes and patches to open-source projects powering the platform.
- Developing governance framework and financial sustainability model for nonprofit transition, including community stakeholder engagement and fiscal sponsorship evaluation.
